

master checks module presence and status
can read and write configuration parameters
module could send go nogo, warnings, change status, cancel/hold countdown etc.

modules can send alerts
maybe can trigger go/nogo switches, hold countdown
send status to master
or send alert to master

module interaction
modules can use other modules:
e.g. a timer module realtime clock module etc.
modules may send direct commands to other modules, and report status to master
